

Fuel Cell Technology Alternative Drives

Instructor:

**Greg Michalek
Bosch**

A foundational understanding of fuel cell systems, hydrogen technologies, and the key components and operating parameters that drive modern and future fuel cell transportation solutions

- ✓ *The basics of fuel cells and the application in automotive applications*
- ✓ *Hydrogen production, storage, and supply systems*
- ✓ *Fuel cell systems and components - Anode, cathode, and cooling paths*
- ✓ *The differences between low-temperature and high temperature fuel cell power modules*
- ✓ *Electrical subsystems and key operating parameters for fuel cells*
- ✓ *Challenges and advancements shaping the future of fuel cell transportation*

**WED 6/25/25 &
THU 6/26/25**

**6pm to 8pm EDT
Each Evening**

Code: **OLT463**

Cost: **\$150 USD**

Per Student
